Exercise 1

在 Homework8 (1) 中汇编代码上进行基本块划分,构建流图。

```
由以下汇编代码,划分基本块,给出如下
                                             cmpl
                                                     $100, 8(%ebp)
流图:
                                                      .L3
                                             jg
                                             cmpl
                                                     $99, 12(%ebp)
.text
                                             jle
                                                      .L2
.globl test
                                                     $40, 8(%ebp)
                                             cmpl
    .type
            test, @function
                                                      .L2
                                             jg
test:
                                                     $20, 12(%ebp)
                                             cmpl
            %ebp
   pushl
                                                      .L3
                                             jle
            %esp, %ebp
   movl
                                                     $-10, 8(%ebp)
                                             cmpl
            $16, %esp
    subl
                                                      .L3

            8(%ebp), %eax
   movl
                                                      .L2
                                             jmp
            12(%ebp), %eax
    cmpl
                                         .L3:
    jle
            .L4
                                                     $100, -4(%ebp)
                                             movl
            $0, 12(%ebp)
    cmpl
                                                      .L5
                                             jmp
            .L4
    jе
                                         .L2:
            $10, 12(%ebp)
   cmpl
                                                     $60, -4(\%ebp)
                                             movl
            .L4
    jle
                                         .L5:
            $0, 8(%ebp)
    cmpl
                                                     -4(\%ebp), \%eax
                                             movl
    jе
            .L4
                                             leave
            $20, 8(%ebp)
   cmpl
                                             ret
            .L3
    jg
.L4:
```

图 1: Homework8 (1) 代码对应流图

Exercise 2

给出 Homework1 (2) 中 C 程序相应的三地址中间代码,并构建流图。

```
main()
{
    int i, j = 0;
    for(i = 0; i < 10; i++)
    {
        switch(i)
        {
            case 0: case 2: break;
            case 3: case 5: continue;
            default: j = i;
        }
        L: j += i * 2;
    }
}</pre>
```
